1

Agenda

- OpenNotes: Background & NW OpenNotes Consortium (Chin)
- Geisinger (Erskine)
- VCU (Banas)
- Sutter (Chan)
- National Overview & Summary (Santa)
- Discussion

The screenshot shows a web browser window with the URL www.healthcareitnews.com/news/opennotes-amdis-partner-spur-patient-engagement-through-clinical-transparency-ehrs. The page header includes "Healthcare IT News" and navigation links for "TOPICS", "SIGN UP", and "MAIN MENU". The article title is "OpenNotes, AMDIS partner to spur patient engagement through clinical transparency in EHRs". Below the title, it states: "New alliance with CMIO group another step toward expanding to 50 million people in the next three years." The byline reads "By Mike Miliard | June 21, 2016 | 01:32 PM". At the bottom, there is a "SHARE 11" button and social media icons for Facebook, Twitter, LinkedIn, and Email.

3

What is OpenNotes?

- Patients invited to review their providers' visit notes through secure patient portals; patient notified by email that visit note is available for review.
- "OpenNotes" is a movement to give patient's access to their EHR notes via the internet. Not a specific vendor product or software.
- Research and demonstration project in 2010

*Adapted from a presentation by: Tom Delbanco, MD, MACP and Jan Walker, RN, MBA
Harvard Medical School and Beth Israel Deaconess Medical Center*

4

3 Overall Study Findings

- Patients are more engaged in their care:
 - 80% opened at least one note.
 - 70 – 80% reported taking better care, better understanding, better prepared for visits, felt more in control, better at taking meds.
 - 1- 8 % caused confusion, worry, or offense
- Providers not adversely affected
- After one year, 99% of patients wanted to continue, no provider asked to have OpenNotes turned off.

*Adapted from a presentation by: Tom Delbanco, MD, MACP and Jan Walker, RN, MBA
Harvard Medical School and Beth Israel Deaconess Medical Center*

5

NW OpenNotes Consortium

- June 2013:** Convene meeting of Oregon's health systems, consumer groups, and policy makers. Presentation from Tom Delbanco and Jan Walker
- September 2013:** Agreement to form a consortium of health systems to collaborate together to implement OpenNotes as a community
- Monthly→Quarterly:** Meetings involving major health systems

NW Consortium Clinical Participants

Status

- 11 major health organizations committed to implementing OpenNotes (by YE 2015)
- Estimate: 1 million patients in Portland Metro/Oregon with access to their provider's visit notes
- All but 2 completely implemented (2 still in pilot)
- Most implemented "big bang"
- Cooperatively competitive
- Smaller practices more difficult
- Now looking to extend consortia approach to:
 - Boise, ID
 - Minneapolis, MN
 - Salt Lake City, UT
 - Denver, CO
 - Madison/Milwaukee, WI

ORIGINAL RESEARCH

Inviting Patients to Read Their Doctors' Notes: A Quasi-experimental Study and a Look Ahead

Tom Delbanco, MD*; Jan Walker, RN, MBA*; Sigall K. Bell, MD; Jonathan D. Darer, MD, MPH; Joann G. Elmore, MD, MPH; Nadine Farag, MS; Henry J. Feldman, MD; Roanne Mejilla, MPH; Long Ngo, PhD; James D. Ralston, MD, MPH; Stephen E. Ross, MD; Neha Trivedi, BS; Elisabeth Vodicka, BA; and Suzanne G. Leveille, PhD, RN

Background: Little information exists about what primary care physicians (PCPs) and patients experience if patients are invited to read their doctors' office notes.

Objective: To evaluate the effect on doctors and patients of fac-

of electronic messages from patients did not change. After the intervention, few doctors reported longer visits (0% to 5%) or more time addressing patients' questions outside of visits (0% to 8%), with practice size having little effect; 3% to 36% of doctors

OpenNotes® - Study Results (Geisinger)

	Preintervention Survey (n = 22)	Postintervention Survey (n = 22)
Visits will/did take significantly longer	32	5
Will/did spend more time addressing patient questions outside of visits (not asked)	45 (-)	0 (32)
Will/did spend more time writing/dictating/editing my notes	36	14
Will be/was less candid in documentation	32	9
I will/did change the way I address these topics in my notes:		
Cancer/possibility of cancer	18	18
Mental health	27	27
Substance abuse	32	23
Overweight/obesity	18	5
Medical care will be/was delivered more efficiently	27	32
Notes can be useful for patient communication and education	91	91

Key points

- Providers more concerned than patient pre-implementation
- Provider concerns mollified post implementation
- Secured email communication remains constant
- High degree of patient participation continued

Geisinger

13

OpenNotes® - Voluntary Adoption

Key Points

- 600k encounter reviewed out of 2M visits/year
- Virtually no complaints from patient/providers
- Total of 277 (<1%) patient excluded by providers
- Sustained adoption

	Unique Users Accessing Module	Total Hits/Month

16

Interactive Patient System Overview

The Interactive Patient System (IPS) provides patients with entertainment and clinical content during a hospital stay

Patients indicate IPS helps distract them from their pain and keep them informed about their hospital stay.

Geisinger

17

Take-Home iPad Build and Integration

iPad content:

- App with reminder schedule pre- and post surgery
- Educational materials (documents and videos)
- Informational materials (clinic contacts, directions, maps)
- Med Rec and 90 day postop N2QOD Lumbar Spine questionnaires
- Pre and Post Surveys
- Spine Education Class Videos
- FaceTime call with provider
- FitBit 3-axis accelerometer

Metrics:

- Pre- & Post- qualitative feedback surveys
- N2QOD Lumbar Spine questionnaire
- Medication Reconciliation questionnaire

Geisinger

On-going Projects Exploring OpenNotes

- **Adherence:** Found that OpenNotes increase adherence to certain medications
- **Resident Learners:** Impact of opening resident/fellow notes on the learners and faculty
- **Caregivers:** Extended OpenNotes to adult patients who had granted someone proxy access to their online portal
- **MFM:** Impact of OpenNotes on maternal anxiety in high-risk pregnancies
- **Mental Health:** Impact of opening mental health notes to patients
- **Long-term Users:** Resurveying initial OpenNotes users to understand impact over time
- **OurNotes:** Agenda setting and cogeneration of notes

Geisinger

19

OurNotes® – Proposed workflow

Step I: Pre-Visit agenda setting and data entry

Step II: Agenda setting and data entry in office waiting room

Step III: Patient-provider narrative

Step V: Post-visit co-signature and opportunity for comments and questions

Geisinger

BIDMC (PI – Delbanco) OurNotes study funded by Commonwealth Fund

20

OurNotes® - Proof of Concept

- Explored the use of HIT to engage patients and families through co-generation of clinical progress
 - Developed a process of collecting pre-visit documentation by testing multiple technologies
 - Identified barriers and areas of opportunity from the patient and provider perspective
 - Formulated an implementation plan for broader scale
- Two week pilot in Geisinger Clinic
 - Structured and unstructured narratives
- Modalities
 - iPad
 - Stylus
 - Bluetooth keyboard

Geisinger

BIDMC (PI – Delbanco) OurNotes study funded by Commonwealth Fund

21

OurNotes® - POC results

- Patient Exit Survey and Interviews
 - 64 OurNotes completed (N=7 family caregivers)
 - 77% reported less than 2 minutes to complete
 - 64% reported being 'very comfortable' with technology
 - 70% reported that OurNotes made them feel more involved
 - 83% reported that OurNotes allowed for focused time with provider to review health goals
- Provider Interview
 - Patient was able to set their agenda for the visit
 - Kept patient/provider from missing something wanted to discuss
 - Patient provided chief complaint and provider can be ready to discuss prior to appointment
 - Added to efficiency – **did not slow down visit**

Geisinger

22

Proven Experience - Patient Feedback

The image displays three sequential screenshots of the OurNotes app interface, all featuring the 'GEISINGER' header. The first screenshot asks 'Where did your experience go wrong?' and lists options: 'I felt like the team did not adequately address my pain, if I had any', 'Working with office or support staff', 'Working with nurses', 'Working with my doctor or physician assistant', 'Learning what to expect about my care', 'Billing', and 'Other'. The second screenshot asks 'We'd like to hear from you. What would you like to do next?' and lists options: 'Talk to us', 'Get a refund of my copay', 'Send us a message', and 'Submit my experience'. The third screenshot shows 'Your copay was: \$1,000' and asks 'How much of your copay would you like back?' with a slider ranging from \$0 to \$1000 and buttons for '-' and '+'. A red asterisk note says '*Please enter the dollar amount of your refund'.

Our Patient Portal – HealtheLife (Cerner)

- Started 2011
- 56,000 patients
- Contains
 - Messages
 - Medication refills
 - Education
 - Labs (real time)
 - Radiology (4d)
 - Pathology (4d)

Addressed fears up front

Problem	Solution
Could be dangerous	Or could avoid danger
I will get all kinds of requests for corrections	Doesn't usually happen
They won't understand the terminology	Use Open Notes FAQs and abbreviations
What about my patients who have mental health issues?	Haven't heard of issues
What about psychiatry notes?	Not in yet, but Open Notes studying
What if I want to write something the patient shouldn't see (their safety/my safety)	Protected note, not in portal

What notes we share (currently)

- Outpatient, signed, provider visit notes
 - Cerner only allows release based on Note Type, doesn't allow for a provider to decide when to release the note or the content
- Resident notes are only seen after authentication by attending
- “Released” at midnight
- Issues with implementation:
 - Turn on additional note types, these will be visible from the original date
- Issues post go-live
- Optimal to have patient notification on note publication

What we don't share (yet)

- Inpatient Notes
- Psychiatry / Psychology Notes
- Allied Health notes – PT/OT
- Discharge Summaries –Currently approved and awaiting implementation

March 29, 2016

Protected note, not in portal:

Add Document: SMITH II, LAWRENCE WAYNE - 6699474

*Type: Protected Info - Not in Portal *Author: BANAS MD, COLIN A

*Date: 02/18/2016 1135 Status: In Progress

Subject:

Associated Providers: Modify

Information typed into this particular note type will NOT post to Cerner

The use case from some doctors (PCPs mostly) was that some sensitive things like elder abuse or confidential things like substance abuse may not be appropriate for someone's PROXY to be able to see.

So in a way this was a way to protect a patient from a PROXY in some touchy situations

Cerner controls content release by "Note Type" - so we created "Protected Info - Not in Portal"

Action List

Sign Save Save & Close Cancel

Protected Note: Not in Portal

- Used 16 times since creation (> 1 year)
- APS / CPS concerns
- Substance Abuse concerns and care planning
- Malingering concerns
- User error

Patient was scheduled to be seen in clinic on 2/22 but was a no-show. Looking through communications it appears patient/wife was requesting refills for his benzos. In recent notes they report he is only taking two pills daily. In preparation for his visit I pulled his PMP. It appears he has been getting prescriptions for THREE pills daily with a 90 day supply and the patient has been going thru these prescriptions in two months, meaning he is taking at least 4-5 pills per day.

A discussion should be had with the patient and his wife at the next visit about appropriate benzo use and if this medication should be continued.

During examination, I was examining pt's L lower leg wounds when I noticed what appeared to be a small fruit fly (~1-2mm long by 1mm wide) in the ointment pt had applied to his wound (which he stated was vitamin E). There was clearly no evidence of erythema, inflammation, laceration, lesion, or any other disturbance of the skin in the immediate vicinity of the fruit fly (about 1 cm away from the active wounds). As I was examining the wound, he produced an exacto-knife. Before I could convince him otherwise, he began to scrape up some of the fibrinous material covering one lesion. I went out of the exam room to grab a microscope slide, and when I came back, he had produced a small pile of skin scrapings including the dead fruit fly. With no involvement of the skin under the fly and the fact that it was contained within the ointment, I suspect it was placed next to the wound to by the patient in order to garner support for his theories of parasite infestation.

I saw and his brother in PGP clinic today. While I was in the exam room with Mom and the 2 boys, I witnessed her appear to slap. Her open hand appeared to have hit his right cheek. He then held his right cheek. No mark was left. Also I noted 2 times that walked up to his mother, she grabbed him roughly by the arms making him lose his balance and fall backwards onto the ground. Of note he does have an abnormal gait. I notified clinic social worker. Of note I did not find any bruising on exam of either boy.

Did you think seeing your note helps you take better care of yourself?

Answered: 428 Skipped: 266

Comments

- It increases my sense of **empowerment** and reinforces my role as the most important member of my health care team.
- Seeing my notes **enlightens** my knowledge of my health and has me **less worried**. So, thank you,
- This has changed my **understanding** of my disease and illness. I feel like a **partner** in my health treatment and no longer a victim to my illness.
- It allows me to be more **involved** in my healthcare without the need to drive to or sit in the office of or take up the time of my provider.
- I often did not understand the instructions or information at the visit. After reading the note I felt **empowered** with what was needed on my part to improve my health condition
- Good reminder to **comply** with the prescribed plan of care
- Allows me to see how I and my **concerns were perceived**.

Comments: Dirty laundry

- Not accurate: misses some health issues, some listed health issues are not updated
- In addition to reviewing my medical information, the portal has also allowed me to detect provider documentation errors in my medical history, e.g. a documentation note that I am currently taking a medication that I had stopped taking 45 days earlier. This gives me the opportunity to correct my medical record
- Usefulness and thoroughness of info varies significantly with the provider
- "It Makes Me Stop seeing the Doctor who wrote the Note from their BS in the Note" 🤔

Summary

- Tell the “why”
- Use the Open notes website
- Be armed with data from sites that are live (from Open notes site)
- Encourage provider comments prior to go-live
- Decide on a note type at a time vs everything
- Needs to come from leadership
- Don't forget to tell patients that the notes are viewable

Open Notes at Sutter Health

Albert S. Chan, MD, MS
Chief of Digital Patient Experience
Sutter Health
@albertschan

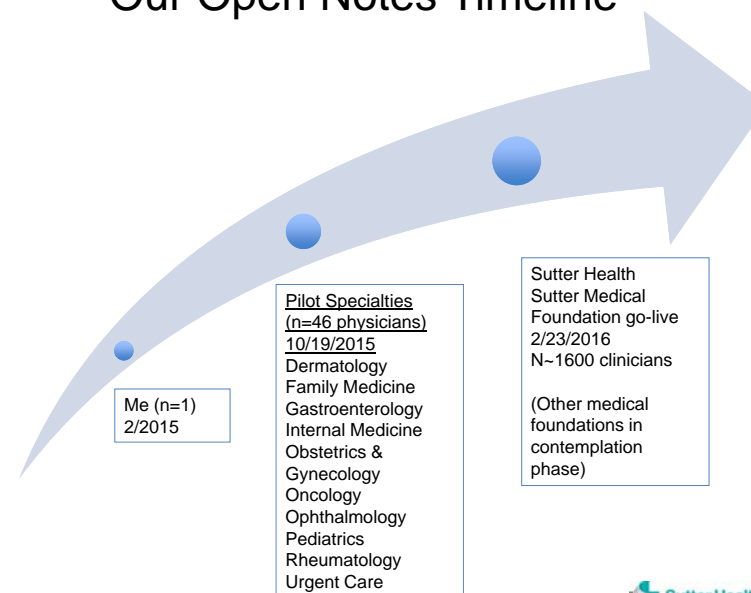

Our Sutter Health Network

Serving more than 100 communities with:

- 5,000 physicians (physician medical foundation model; plus 4 IPAs); aligned under the Sutter Medical Network
- 24 acute care hospitals
- 51,000 employees
- \$10.2 billion in revenues (2014)
- Home health and hospice services throughout Northern Calif.
- Outpatient surgery and specialty care centers
- Medical research and medical education/training
- Largest singular Epic instance in the world

Our Open Notes Timeline

Pilot Physician Survey

- 61% of pilot providers responded to the survey
- 96.4% of doctors are minimally or not concerned at all that visits will take more time with Open Notes
- 92.9% of physicians stated "Making visit notes available to patients online will decrease or not change my risk for lawsuits"
- 82.8% of physicians agreed or somewhat agreed that Open Notes would help patients "Better remember the plan for their care"
- 78.6% of physicians agreed or somewhat agreed that Open Notes would help patients "Be more likely to take medications as prescribed"
- For all questions pertaining to Impact of Open Notes on My Practice, no physician indicated "I am so concerned that I do not want open notes"
- Physician pilots are concerned that the pilot is somehow not representative of viewing practices of patients because we have not heavily advertised the availability of notes
- Many doctors believe it would be useful to have the ability to selectively block notes for benefit of the patient, few have done so in the pilot

Patient Feedback

- From: <Patient name removed>
Sent: 6/29/2015 8:37 PM PDT
To: Janahn C. Scalapino, MD
Subject: it worked! *No Response Required*

I LOVED the opportunity to read your complete progress note! what a huge difference from only being able to see the meaningless "after visit summary." turns out, it was right there as a part of the summary. I do hope this will become routine part of My Health Online for patients. I'd be happy to advocate for that if there's a way I can do it.

It was a pleasure to meet you today. I've already spoken to dan to let him know how impressed I was. I felt like you attended to me in a most personal (and personable) way, and your physical exam was probably the most thorough I've had since joining Sutter. I've often felt disheartened at how much the emphasis of documenting everything in the computer has been at the expense of patient contact, but you managed to bridge that gap! thank you.

<patient name removed>

47

Implementation... Nitty gritty details

Sutter Wiki • My Health Online - OpenNotes

Typical User Roles: Ambulatory/SCC Clinicians & Office Staff | Health Records | MHQ Wiki Home | Sutter Wiki Home
Applies to: Ambulatory, SCC

Overview

Open Notes is currently live for select pilot providers as of 5/12/15. All providers in the Sutter Medical Foundation service area will be live on 2/23/16.

Open Notes allows patients to see progress notes from their providers or from staff that leave notes on progress notes in these Encounters (see *The Patient's Experience below* for a sample). This change only applies to specific Encounter types (list below), for Encounters after the effective date of the pilot (please note that these notes will affect Child/Teen accounts as well, as long as the requirements below are met).

Encounter Types

Only the following Encounter types will have progress notes displayed. Please note that the Encounter must be closed (and after the pilot effective date) before the patient will see their progress notes.

- Office Visit [101]
- Home Visit [138]
- Urgent Care Office Visit [212]
- Education [125]
- Care Team Visit [244]

48

Implementation... Nitty gritty details

Blocking Note Release

If circumstances require that a note should not be displayed to the patient, a standard SmartPhrase [MYPROGRESSNOTEHIDE [1531753]] can be used in the body of a progress note to prevent the note from displaying to the patient. When that SmartPhrase is used, all progress notes from the Encounter will be hidden from the patient.

To later show notes from the Encounter, SmartPhrase .MYPROGRESSNOTESHARE [1531751] can be used to display progress notes. You can verify whether a note is displayed by checking the Progress Notes - Shown in MHO field on the Encounter Report (below in red).

The Cost of Technology

Toll, JAMA 2012⁵⁸

Key Questions

- Do you want to pursue this kind of transparency?
- Do you have the tools to do so easily, efficiently, cheaply?
- **Is this a “keep up” strategy or a “transformational” strategy?**
- Most critical factor=organizational leadership

59

Not About Technology, About Culture

60

OpenNotes Crawling to Running

- Business

61

The OpenNotes Patient Safety Initiative

- Online patient reporting tool linked to notes-among first in the country
- Interdisciplinary team: 7 depts/divisions including PFAC in 2013
- Goal: Offload clinicians (report-action algorithm, vetting) while empowering patients as safety partners
- About 6000 patients with portal access seeing 40 participating providers were invited to participate
- A link at the end of the note led to a 9 item survey with both quantitative and qualitative questions.
- "Potential Safety Concern" - not understanding the plan of care or reporting a possible inaccuracy

Generously funded by CRICO
